AutoCAD has been the most popular, and one of the most used, CAD programs throughout its history. Since it was first released, AutoCAD has undergone multiple revisions and the majority of the features and functions of the current version (2019) have been present in some form since its initial release. AutoCAD is still popular and is updated regularly. In 2019, Automated Drafting and Designing was announced as the new name for AutoCAD in the cloud. AutoCAD has evolved into a highly complex program with many features that are essential in engineering and architectural design work. The program is relatively easy to learn, but has many potential pitfalls for beginners. The type of program and difficulty of the project are largely determined by how complex the models are and how much precision is required in the drafting. AutoCAD is extremely capable and flexible and the thousands of users around the world are able to work on complex models. Autodesk publishes a list of key commands on the "Keyboard Shortcuts" screen that appears on the right side of the window. It is possible to perform many tasks with AutoCAD keystrokes using the Windows key. The main command keystroke is CTRL+P (Command + P) (Command + P is on the numpad). Using the numpad, there are also keystrokes for the following commands: C, G, I, M, R, U, V and Z. It is useful to know the keystrokes for moving and rotary tools (rotate tool, horizontal/vertical grip tool, wireframe and grid). When you use the Z key, the program can lock up for short periods of time; CTRL+Z will restart it. Other features and commands can be accessed through menus. For example, when the command "Fit Geometry" is selected from the "File" menu, there is an option to "Undo last Fit command". How to make a cube To make a cube, select the "Cube" tool and draw a cube on a face with the arrow pointing to the left or right of the view port as shown in the images below. Cube tool Make sure that the cube is set to 3D in the toolbox and click and drag to make the cube. Make sure that the cube is set to 3D in the toolbox and click and drag to make the cube.
